

Getting ready for roach treatment might take a little time, but the results are well worth it. Here's a handy checklist to ensure your home is prepped and ready for our expert pest control treatment. Taking these simple steps doesn't just make our job easier, but ensures that you get a thorough treatment; giving you the peace of mind that your home is bug free.

### **Roach Treatment Prep Steps:**

- Do not use any other means of cockroach control such as bug bombs, aerosols, etc., *before* or *after* treatment, as this can hamper the success of the treatment.
- Remove all items from cabinets and underneath sinks. Items such as silverware, dishes, pots and pans, open food, etc., may be placed in bags or boxes. Removing them from the kitchen area will provide better workspace for the technician.
- Small appliances such as toasters, microwaves, and coffee makers should be left on the counter. These items will be inspected and treated if necessary.
- In bathrooms, put away all toothbrushes, water glasses, and personal items. Remove items from underneath the sink unit and place them in plastic bags or boxes.
- If you have roaches in other rooms besides the kitchen or bathroom, move any items away from baseboards.
- Make sure all children's and pet's toys are put away. Place all pet food and water dishes inside plastic bags and remove them from areas that will be treated.

A little time prepping for your pest control treatment will yield a big result: a home you can enjoy free from bugs.
